Source data	EarthStat		
	Citation: Ramankutty et al. 2008	Native format: 5 arc-min grid	Units: percent cover
Column name	pst_pc_{xoo} <i>(for syntax options of suffix {xoo} see next lines)</i>		
	Spatial extent {x}: {s} in sub-basin {u} in total watershed upstream of sub-basin pour point		
	Dimension {oo}: {se} spatial extent (%)		
	Existing suffixes {xoo}: sse use		

Data description	EarthStat provides a global data set of croplands and pastures circa 2000 by combining agricultural inventory data and satellite-derived land cover data. The agricultural inventory data was used to train a land cover classification dataset obtained by merging two different satellite-derived products (Boston University's MODIS-derived land cover product and the GLC2000 data set). According to EarthStat data, there were 15 million km ² of cropland (12% of the Earth's ice-free land surface) and 28 million km ² of pasture (22%) in the year 2000.
